

DILYS JOY OTIENO

Contact: joydilys5@gmail.com | +254713833058

Professional Summary

Dedicated and analytical professional with a strong technical foundation in full-stack development and a passion for data-driven decision-making. Proven ability to bridge the gap between complex system architecture and actionable business intelligence, with hands-on experience in data analysis, dashboard development, and database optimization gained through internships at AppKings Solutions. Highly proficient in leveraging Python, SQL, and analytical modeling to transform raw, fragmented data into clear insights that drive strategy. Committed to solving complex business problems at the intersection of robust system design and advanced data science.

Skills

- Full-Stack Development
- RESTful APIs
- Debugging & Testing
- Code Optimization
- Programming Languages: Python, C#
- Backend Frameworks: Flask, ASP.NET Core
- Frontend Technologies: HTML5, CSS3, Tailwind CSS, Bootstrap
- Database Management: SQL Server, SQLite, SQLAlchemy
- Machine Learning & Data Science: Predictive modeling (LSTM, ARIMA), Data Forecasting
- Hardware Integration: Biometric API integration
- Development Environment: Visual Studio Code, Git, Command-Line Interface (CLI)
- Soft Skills: Effective Communication, Team Collaboration, Time Management, Mentorship and Knowledge Sharing

Education. August 2022- April 2026

- Kisii University BSC in Information Science and Technology

Work Experience

Data Analyst Intern. Appkings Solutions Limited, Nairobi | May 2026 — Aug 2026

- Designed, developed, and tested robust applications utilizing C# and Python.
- Spearheaded the development of a Student Management Information System (MIS).
- Defined functional requirements, implemented secure authentication, and built report generation features.
- Resolved critical software bugs to ensure system stability and performance.

- Assisted in UI/UX design and prototyping for web applications.
- Participated in peer-led code reviews to ensure adherence to standards.

Projects

Clinical Management System

- Engineered a comprehensive clinical and home health care platform using Python, Flask, and MySQL to manage patient vitals, clinical records, and scheduling.
- Implemented secure data structures to track patient history and medical data, ensuring seamless access for clinical decision-making.
- Developed backend logic that integrates system scheduling with operational workflows, reflecting real-world enterprise requirements for patient data management.

Laundry Service Management Platform

- Built a full-stack laundry marketplace platform using Flutter, Flask, and SQLite, connecting customers with nearby laundry service providers through a locationbased service model.
- Developed separate client and business-owner workflows, including registration, authentication, service management, order placement, and order tracking.
- Implemented business onboarding features such as business registration, service catalog creation, and document management, enabling scalable onboarding of service providers.
- Designed the system architecture to support future integration of real-time messaging, maps, cloud storage, and payment processing.

Point of Sale (POS) and Inventory Management System

- Designed and developed a POS system using HTML, CSS, JavaScript, and browserbased storage technologies to streamline retail sales operations.
- Implemented inventory tracking, supplier management, category management, sales reporting, and stock monitoring functionalities to improve operational visibility.
- Built CRM capabilities for customer information management and ERP-style order history tracking to support business process optimization.
- Generated real-time sales analytics and inventory reports, enabling data-driven purchasing and stock replenishment decisions.

Student Management Information System (StudentMIS)

- Developed a web-based Student Management Information System using ASP.NET Core MVC, C#, Entity Framework, and SQL Server to manage academic and administrative processes.
- Implemented student profile management, course management, unit registration, academic reporting, announcements, and role-based access control.
- Designed AJAX-powered dashboards and dynamic content loading to improve user experience and system responsiveness.
- Engineered secure authentication and authorization workflows using ASP.NET Identity, supporting scalable multi-user access management.

Bill Payment and Amenities Ordering System

- Developed a digital platform for bill payment and amenities ordering using Flask, SQL databases, HTML, CSS, and JavaScript.
- Designed backend APIs for transaction processing, order management, and service requests, improving operational efficiency for property and facility management.
- Implemented database-driven workflows for tracking payments, orders, and customer interactions.
- Created intuitive user interfaces that simplified service requests and payment management for end users.
